SCHEME OF EVALUATION & GRADING

The level of student's academic performance in the course unit as the aggregate of continuous evaluation, mid-term examinations & end-term examinations is reflected by letter grades on a ten points scale according to the table given below:

Aggregate Marks (Out of 100)	Letter Grade	Grade Point
≥90	A+	10
80-89	A	9
70-79	B+	8
60-69	B	7
50-59	C+	6
40-49	C	5
35-39	D	4
30-34	E	2
<30	F	0

MINIMUM ACADEMIC REQUIREMENTS:

The student must score a minimum Grade 'D' in each course to pass the course unit.

SEMESTER PERFORMANCE INDEX (SPI)/TRIMESTER PERFORMANCE INDEX (TPI)

The Semester/Trimester performance of the student is indicated as "Semester Performance Index (SPI)/ Trimester Performance Index (TPI)" at the end of every Semester/Trimester.

SPI/TPI is the weighted average of Grade Points of all letter grades secured by a student for all the course units in the Semester/Trimester. The formula for computing 'I', where 'I' is SPI or TPI as applicable, is as under:

$$I = \frac{c_1g_1 + c_2g_2 + \dots + c_kg_k}{c_1 + c_2 + \dots + c_k}$$

"c" is the credit given to the course

"g" is the grade point obtained in the course

"k" is the number of courses in the Semester/Trimester

CUMULATIVE GRADE POINT INDEX (CPI)

The CPI is used to describe overall performance of a student in a programme. It is weighted average of grade points obtained by him/her in all Semesters/Trimesters.

$$CPI = \frac{\sum_{i=1}^n C_i I_i}{\sum_{i=1}^n C_i}$$

"C" is the total credit of the Semester/Trimester

"n" is the semester for which the CPI is calculated

CONVERSION OF CPI TO PERCENTAGE OF MARKS

Percentage of marks = [CPI - 0.75] x 10

CPI

Greater than or equal to 8.25

Less than 8.25 and greater than or equal to 6.75

Less than 6.75 and greater than or equal to 5.75

Less than 5.75 and greater than or equal to 5.25

EQUIVALENT DIVISION

First Division with honours*

First Division

Second Division for degree courses

Second Division for diploma courses

*First division with honours will be awarded only if the candidate clears all the subjects in single attempt in normal duration of the programme and that too in regular semesters/trimesters.

DCE 3001 : FLUID MECHANICS

Credits: 4

Semester III

L-T-P: 3-1-0

Module No.	Contents	Teaching Hours
I	<p>Introduction: Ideal and real fluids, fluid mechanics, Hydrostatics, Hydrodynamics, Hydraulics.</p> <p>Properties of Fluid: Mass density, specific weight, specific gravity, viscosity, surface tension - cohesion, adhesion and, capillarity, vapour pressure. Units of measurement and their conversion compressibility.</p> <p>Hydrostatic Pressure: Pressure, intensity of pressure, pressure head, Pascal's law and its applications. Total pressure, resultant pressure, and center of pressure. Total pressure and center of pressure on horizontal, vertical and inclined plane surfaces of rectangular, triangular, trapezoidal shapes and circular.</p> <p>Buoyancy: Buoyancy, metacentre, stability of floating body.</p>	12
II	<p>Measurement of Pressure: Atmospheric pressure, gauge pressure, vacuum pressure and absolute pressure. Piezometer, simple manometer and differential manometer.</p> <p>Fundamentals of Fluid Flow: Types of Flow: Steady and unsteady flow, laminar and turbulent flow, uniform and non-uniform flow. Discharge and continuity equation (flow equation). Types of hydraulic energy: Potential energy, kinetic energy, pressure energy. Bernoulli's theorem; statement and description (without proof of theorem) and simple numerical problems.</p> <p>Flow Measurement: Venturimeter and mouthpiece, Pitot tube, Orifice and Orificemeter, Current meters, Notches and weirs.</p>	14
III	<p>Flow in Pipes: Definition of pipe flow; Reynolds number, laminar and turbulent flow - explained through Reynold's experiment, Critical velocity and velocity distributions in a pipe for laminar flow, Head loss in pipe lines due to friction, sudden expansion and sudden contraction, entrance, exit, obstruction and change of direction, Hydraulic gradient line and total energy line, Flow from one reservoir to another through a long pipe of uniform cross section, Pipes in series and parallel, Water hammer phenomenon and its effects</p> <p>Flow through open channels: Definition of an open channel, uniform flow and non-uniform flow, Estimation of Discharge using Chezy's and Manning's formula, Most economical channel sections (rectangular and trapezoidal, Head loss in open channel due to friction.</p> <p>Hydraulic Pumps: Hydraulic pump, reciprocating pump, centrifugal pumps</p>	16

- Massey, B.S. (revised by John Ward-Smith) (1998), Mechanics of Fluids, Chennai Micro Print Pvt. Ltd., Chennai.
- Streeter, V.L., Wylie, E.B., and Bedford, K.W. (1998), Fluid Mechanics, McGraw Hill Companies, Singapore.

DCE 3002 : STRUCTURAL MECHANICS

Credits: 4

Semester III

L-T-P: 3-1-0

Module No.	Contents	Teaching Hours
I	<p>Properties of Materials : Classification of materials, elastic materials, plastic materials, ductile materials, brittle materials, Introduction to tensile test, compressive test, impact test, fatigue test, torsion test on metals.</p> <p>Simple Stresses and Strains: Concept of stress, normal and shear stresses, Concept of strain and deformation, longitudinal and transverse strain, Poisson's ratio, volumetric strain, Hooke's law, modulus of elasticity and rigidity, Bulk modulus of elasticity, relationship between the elastic constants. Stresses and strains in bars subjected to tension and compression. Extension of uniform bar under its own weight, stress produced in compound bars (two or three) due to axial load, Stress-strain diagram for mild steel and HYSD steel, mechanical properties, factor of safety, Temperature stresses and strains.</p>	14
II	<p>Shear Force and Bending Moment: Concept of a beam and supports (Hinges, Roller and Fixed), types of beams: simply supported, cantilever, propped, over hanged, cantilever and continuous beams, Types of loads (dead load, live load, snow load, wind load seismic load as per IS Codes etc.) and types of loading (point, uniformly distributed and uniformly varying loads, Concept of bending moment and shear force, sign conventions, Bending Moment and shear force diagrams for cantilever, simply supported and overhanging beams subjected to concentrated, uniformly distributed, Relationship between load, shear force and bending moment, point of maximum bending moment, and point of contra-flexure</p> <p>Bending in Beams: Concept of pure/simple bending, Assumptions made in the theory of simple bending, derivation and application of bending equation to circular cross-section, I section, T sections only, Moment of resistance, Calculation of bending stresses in simply supported beam.</p>	16
III	<p>Combined Direct and Bending Stresses: Concentric and eccentric loads single axis eccentricity only, Effect of eccentric load on the section stresses due to eccentric loads, Numerical in the case of short columns.</p> <p>Shear Stress in Beams: Concept of shear stresses in beams, shear stress distribution in rectangular, circular I, T sections</p> <p>Slope and Deflection: Necessity for determination of slope and deflection, Moment area theorem .</p> <p>Columns and Struts: Combined bending and direct load on short column, Middle third and middle quarter rules, Euler's theory for long columns.</p> <p>Analysis of Truss: Concepts of a perfect, redundant and deficient frames, Assumptions and analysis of truss by method of joints, method of sections, graphical method.</p>	18

DCE 3003 : SURVEYING - I

Credits: 2

Semester III

L-T-P: 2-0-0

Module No.	Contents	Teaching Hours
I	Introduction: Basic concepts of surveying -objectives, Types of surveying, Unit of measurement and their types, Instruments used for taking these measurements, classification based on surveying instruments Chain Surveying: Purpose of chain surveying, principles of chain surveying and its advantages and disadvantages, Obstacles in chain surveying, Direct and indirect ranging offsets and recording of field notes, Errors in chain surveying and their corrections	6
II	Leveling: Leveling principles, Basic terms and definitions, Leveling instruments their working, advantages and disadvantages, Types of leveling staff, Concepts of line of collimation, axis of the bubble tube, axis of the telescope and vertical axis, Temporary adjustment and permanent adjustment of dumpy level by two peg method, Concept of back sight, foresight, intermediate sight, change point, to determine reduce levels, Level book and reduction of levels by Height of Instrument and Rise and Fall method, Arithmetic checks, problem on reduction of levels, fly leveling, check leveling and profile leveling (L-section and X-section), errors in leveling, permissible limits, reciprocal leveling, Computations of Areas of regular figures and irregular figures. Simpson's rule: prismatic formula and graphical method use of planimeter for computation of areas.	10
III	Compass Surveying: Type of compass and their setting and use, Concept of direction (magnetic and true meridian), Bearing (Whole Circle bearing and Reduced Bearing), azimuths, magnetic dip and declination, Compass surveying, Local attraction- causes, detection, error and corrections. Plane Table Surveying: Purpose of plane table surveying, equipment used in plane table survey, setting of plane table, methods of plane table surveying, concepts of three point problem two point problem, errors in plane table surveying and corrections or precautions, testing and adjustment of plane table alidade.	8

DCE 3004 : BUILDING MATERIALS & CONSTRUCTION

Credits: 4

Semester III

L-T-P: 4-0-0

Module No.	Contents	Teaching Hours
I	<p>Building Stones: Classification of Rocks-Geological classification, Chemical Classification, Physical classification, general characteristics of stones- marble, kota stone, granite, sand, trap, basalt stone, lime stone and slate.</p> <p>Brick and Tiles: Introduction to bricks, Raw materials for brick manufacturing and properties of good brick making earth, Manufacturing of bricks, classification and specification of bricks as per BIS:1077, testing of bricks as per BIS:3495 (Compressive strength, water absorption – hot and cold water test, efflorescence, Dimensional tolerance, soundness). Building tiles; Types of tiles-wall, ceiling, roofing and flooring tiles, Ceramic, terrazzo and PVC tiles.</p> <p>Cement: Introduction, raw materials, flow diagram of manufacturing of cement, Various types of Cements, their uses and testing.</p> <p>Lime: Classification and types of lime & properties of lime.</p> <p>Timber: Classification & Identification of Timber, Properties of timber, defects in timber, factors affecting strength of timber, method of seasoning & preservation of timber.</p> <p>Metal: Ferrous Metals- Composition, properties and uses of cast iron, mild steel, HYSD steel, high tension steel as per BIS, Commercial forms of ferrous, metals, Aluminum and Stainless Steel.</p>	14
II	<p>Introduction: Definition of a building, classification of buildings based on occupancy, Different parts of a building.</p> <p>Foundations: Concepts, types of foundation-shallow and deep, Shallow foundation- constructional details of: Spread foundations for walls, thumb rules for depth and width of foundation and thickness of concrete block, stepped foundation, masonry pillars and concrete columns, Earthwork- Layout/setting out for surface excavation, cutting and filling, Excavation of foundation, trenches, shoring, timbering and de-watering</p> <p>Walls: Purpose, classification, load bearing, non-load bearing, dwarf wall, retaining, breast walls and partition walls, Classification of walls as per materials of construction: brick, stone, reinforced brick, reinforced concrete, precast, hollow and solid concrete block and composite masonry walls, Partition walls:</p> <p>Masonry: Brick Masonry- Definition of terms like header, stretcher, queen closer, king closer, frog and quoin, course, bond, facing, backing, hearting, jambs, reveals, soffit, plinth, pillars and pilasters, Bond – meaning and necessity; English, flemish bond and other types of bonds, Construction of brick walls –methods of laying bricks in walls, precautions observed in the construction of walls, methods of bonding new brick work with old (toothing, raking, back and block bonding), construction of stone masonry walls, Importance towards special care during execution of stone masonry work on dressing of stone, size and placing of bond and corner stones, filling joints, proper packing of internal cavities of rubble masonry wall, raking of joints to receive finishes.</p> <p>Arches and Lintels: Meaning and use of arches and lintels- Glossary of terms used in arches and lintels - abutment, pier, arch ring, intrados, soffit, extrados, voussoirs, Springer, springing line, crown, key stone, skew back, span, rise, depth of an arch, haunch, spindle, jambs, bearing, thickness of lintel, effective span, Arches- Types of Arches</p> <p>Damp Proofing and Water Proofing: Dampness and its ill effects on bricks, plaster, wooden fixtures, metal fixtures and reinforcement, damage to aesthetic appearance, damage to heat insulating materials, damage to stored articles and health, sources and causes of dampness, Sources of dampness - moisture penetrating the building from outside e.g. rainwater, surface water, ground moisture. Moisture entrapped during construction i.e. moisture in concrete, masonry construction and plastering</p>	16

	<p>work etc. Moisture which originates in the building itself i.e. water in kitchen and bathrooms etc., Damp proofing materials and their specifications: rich concrete and mortar, bitumen, bitumen mastic, polymer coating, use of chemicals, Damp proofing of : basement, ground floors, plinth and walls, special damp proofing arrangements in bathrooms, WC and kitchen, damp proofing for roofs and window sills</p> <p>Floors: Glossary of terms-floor finish, topping, under layer, base course, rubble filling and their purpose, Types of floor finishes - cast-in-situ, concrete flooring (monolithic, bonded) Terrazzo tile flooring, stone (marble and kota) flooring, PVC flooring, Terrazzo flooring, glazed tiles flooring, Timber flooring, description with sketches. The methods of construction of concrete, terrazzo and timber floors and their BIS specifications, Special emphasis on level/slope/reverse slope in bathrooms, toilets, kitchen, balcony and staircase.</p>	
III	<p>Roofs: Types of roofs, concept of flat, pitched and arched roofs, Glossary of terms for pitched roofs - batten, eaves, fascia board, gable, hip, lap, purlin, rafter, rag bolt, valley, ridge, rain water gutter, anchoring bolts, False ceilings using gypsum, plaster boards, cellotex, fiber boards, Special emphasis on maintenance of slopes, overlaps of roofing materials, applicability and problems of wind ties, size of anchoring bolts</p> <p>Stairs: Glossary of terms: Staircase, winders, landing, stringer, newel, baluster, riser, tread, width of staircase, hand-rail, nosing, Classification of staircase on the basis of material – RCC, timber, steel, Aluminum, Planning and layout of staircase: Relations between rise and tread, determination of width of stair, landing etc., Various types of layout - straight flight, dog legged, open well, quarter turn, half turn (newel and geometrical stairs), bifurcated stair, spiral stair</p> <p>Surface Finishes: Plastering - classification according to use and finishes like plain plaster, grit finish, rough cast, pebble dashed, concrete and stone cladding etc., dubbing, proportion of mortars used for different plasters, techniques of plastering and curing, Pointing - different types of pointing and their methods</p> <p>Painting - preparation of surface, primer coat and application of paints on wooden, steel and plastered wall surfaces, Application of white washing, color washing and distempering, polishing, application of cement and plastic paints</p> <p>Selection of appropriate paints/finishes for interior and exterior surfaces, Importance of preparation of surfaces such as hacking, grooving etc. before application of surface finishes.</p> <p>Anti-Termite Measures: Introduction, site preparation and chemicals used in anti-termite treatment, Treatment of masonry foundation, Treatment of RCC foundation, Treatment of top surface of earth filling, Treatment of junction of walls and floors, Treatment along external perimeter of building, Treatment and selection of timber, Treatment in existing buildings.</p> <p>Building Planning: Site selection- Factors to be considered for selection of site for residential, commercial, industrial and public building, Basic principles of building planning, arrangement of doors, windows, cupboards etc. for residential building, Orientation of building as per IS: 7662 in relation to sun and wind direction, rains, internal circulation and placement of rooms within the available area, concept of Vastu-Shastra, Introduction to National Building code.</p> <p>Building Services: Introduction to firefighting systems, Ducting for Air-conditioning, service lines for cable telephone, and electrical wiring, garbage disposal systems. Water supply system (internal and external).</p>	18

DCE 3005 : ENVIRONMENTAL EDUCATION

Credits: 03

Semester III

L-T-P: 3-0-0

Module No.	Content	Teaching Hours
I	<p>Environment and Ecology: Definition of environment and ecology ,ecosystem and types of ecosystems, energy flow in an ecosystem, food chain, ecological pyramids, ecological balance, important biogeo chemical and material cycles, (water, carbon, sulphur, oxygen and nitrogen etc)</p> <p>Protection of Environment: Importance of clean environment, control of environmental pollution with respect to air, land and water. Conservation of natural resources,</p> <p>Noise Pollution: Definition, sources and effects of noise pollution and control .</p> <p>Renewable Source of Energy: Role of non-conventional sources of energy (biogas, solar, wind etc) in environmental protection</p>	10
II	<p>Water Pollution: Causes of pollution in surface and underground water; BIS standards for water quality, BIS standards for waste water disposal, measures to combat pollution due to waste water, eutrophication of lakes</p> <p>Air Pollution: Definition, principal air pollutants, atmospheric parameters influencing air pollution, effects of air pollution on human beings, plants, animals and economic effects, automobile pollution, BIS ambient air quality standards and measures to combat air pollution</p> <p>Effects of mining, blasting and deforestation: Environmental deterioration due to mining, effects of deforestation and killing of wild animals. Case studies on mining, blasting and deforestation</p>	14
III	<p>Land Use: Effect of land use on environmental quality, natural disasters, soil degradation problems - erosion, salinization and water logging, environmental consideration in housing and city planning, Land reclamation case studies.</p> <p>Environmental Impact Assessment: Definition and requirements, environmental impact assessment of constructional activities – housing, dams, multi- storied buildings, roads, etc, case studies, environmental auditing - basic concepts, sustainable development – concept of carrying capacity</p> <p>Legislation to Control Environmental Pollution: Indian legislative acts for water, land and air pollution control – provisions, scope and implementation</p> <p>Global Issues of Environmental Engineering: Global warming, ozone depletion, acid rain, radiation hazards and their control</p>	12

DCE 3081 : CIVIL ENGINEERING DRAWINGS – I LAB.

Credits: 2

Semester III

L-T-P: 0-0-4

List Of Practical

Module No.	Contents	Teaching Hours
1	Details of spread footing foundations, load bearing and non-load bearing wall for given thickness of walls with the help of given data or rule of the thumb, showing offsets, position of DPC. The details of the concrete and brick plinth protection have to be shown in the drawing.	48
2	Plans of 'T' and Corner junction of walls of 1 Brick, 1-1/2 Brick and 2 brick thick in English bond	
3	Detailed drawing of basement, single wooden floor, double wooden floor.	
4	Elevation, sectional plan and sectional side elevation of flush door, glazed door, paneled door and window, Aluminum door and window with wire gauge shutter. Sketches of various joints of different members.	
5	Drawing plan, elevation of a small building by measurement and foundation detail and sectional elevation.	
6	Drawing detailed plan, elevation and section of a two room residential building from a given line plan, showing details of foundations, roof and parapet	
7	Draw detailed plan, elevation and section of: a. Single flight R.C.C. stair case b. Dog legged wooden stair case	
8	Drawings of following floors of Cement concrete on ground and at first floor c. Conglomerate (Concrete Flooring) d. Bonded cement concrete flooring e. Terrazzo flooring f. Ceramic/vitrified tile flooring	
9	The heat/thermal insulation provisions.	
10	Drawing details of damp proofing arrangement of roofs and walls as per BIS Code. Show the rain water drainage arrangement also.	
11	Draw atleast two drawings with CAD.

Semester III

L-T-P: 0-0-2

List Of Practical

Module No.	Contents	Teaching Hours
1	Determination of yield stress, ultimate stress, percentage elongation and plot the stress strain diagram and compute the value of young's modulus on mild steel	24
2	Testing of HYSD Steel	
3	Determination of Young's modulus of elasticity for steel wire with sear's apparatus	
4	Determination of modulus of rupture of a concrete beam	
5	Determination of maximum deflection and young's modulus of elasticity in simply supported beam with load at middle third point	
6	Verification of forces in a framed structure	

DCE 3084 : SURVEYING LAB-I

Credits: 2

Semester III

L-T-P: 0-0-4

List Of Practical

Module No.	Contents	Teaching Hours
1	Chain surveying: <ul style="list-style-type: none"> a. Ranging a line, chaining a line and recording in the field book, Taking offsets - perpendicular and oblique (with a tape only). b. Chaining of a line involving reciprocal ranging c. Chaining a line involving obstacles to ranging d. Chain Survey of a small area. 	24
2	Compass Surveying : Study of prismatic compass, Setting the compass and taking observations, Measuring angles between the lines meeting at a point	
3	Levelling: <ul style="list-style-type: none"> a. Study of dumpy level and levelling staff, Temporary adjustments of various levels, Taking staff readings on different stations from the single setting and finding differences of level between them. b. To find out difference of level between two distant points by shifting the instrument 	
4	<ul style="list-style-type: none"> c. Longitudinal and cross sectioning of a road/railway/canal d. Setting a gradient by dumpy and auto-level 	
5	Plane Table Surveying: <ul style="list-style-type: none"> a. Study of the plane table survey equipment, setting the plane table, marking the North direction. b. Plotting stations by intersection, radiation and resection method after orientation by different methods. c. Traversing an area with a plane table. 	
	Layout of Buildings by use of surveying instruments.	

DCE 3085 : BUILDING MATERIALS & CONSTRUCTION LAB.

Credits: 2

Semester III

L-T-P: 0-0-4

List Of Practical

Module No.	Contents	Teaching Hours
	CONSTRUCTION MATERIALS LABORATORY	
1	To determine the crushing strength of bricks	
2	To determine the water absorption of bricks and efflorescence of bricks	
3	To identify various types of timbers such as: Teak, Sal, Chir, Sissoo, Deodar, Kail	
4	To determine fineness (by sieve analysis) of cement	
5	To conduct field test of cement.	
6	To determine initial and final setting times of cement	
7	To determine compressive strength of cement	
	BUILDING CONSTRUCTION LABORATORY	
1	Demonstration of tools and plants used in building construction	
2	To prepare Layout of a building: two rooms building with front verandah	
3	To construct brick bonds (English bond only) in one, one and half and two brick thick: (a) Walls for L, T and cross junction (b) Columns	
4	Demonstration of following items of work at construction site by: <ul style="list-style-type: none"> a. Timbering of excavated trenching b. Damp proof courses laying c. Construction of masonry walls d. Laying of flooring on an already prepared lime concrete base e. Plastering and pointing exercise f. Constructing RCC work g. Pre-construction and post construction termite treatment of building and woodwork 	48

DCE 4001 : CONCRETE TECHNOLOGY

Credits: 3

Semester IV

L-T-P: 3-0-0

Module No.	Contents	Teaching Hours
I	<p>Introduction: Concrete – Definition, uses in comparison to other building materials.</p> <p>Ingredients of Concrete: Cement- physical properties of cement; different types of cement as per IS Codes. Aggregates- Classification and Characteristics of aggregates according to size and shape, surface texture, specific gravity; bulk density, water absorption, surface moisture, bulking of sand, deleterious materials, soundness, Grading of aggregates: coarse aggregate, fine aggregate; All-in- aggregate; fineness modulus; interpretation of grading charts. Water- Quality requirements as per IS: 456-2000.</p> <p>Water Cement Ratio: Hydration of cement, principle of water-cement ratio, Duff Abram's Water-cement ratio law: Limitations of water-cement ratio law and its effects on strength of concrete.</p>	10
II	<p>Workability: Workability factors affecting workability, Measurement of workability: slump test, compacting factor and Vee Bee consistometer; Recommended slumps for placement in various conditions as per IS: 456-2000/SP-23</p> <p>Properties of Concrete: Workability, Harshness, Segregation, Bleeding and Strength, Dimensional changes, Durability, Impermeability. Proportioning for Normal Concrete: Objectives of mix design, introduction to various grades as per IS: 456- 2000; proportioning for nominal mix design as prescribed by IS 456-2000. Adjustment on site for-Bulking of fine aggregate, water absorption of aggregate, workability, Difference between nominal and controlled concrete, Introduction to IS-10262-2009-Code for controlled mix design,</p> <p>Admixtures: Introduction to Admixtures (chemicals and minerals) for improving performance of concrete</p> <p>Special Concretes: Concreting under special conditions, difficulties and precautions before, during and after concreting-Cold weather concreting, Under water concreting, Hot weather concreting, Ready mix concrete, Fiber reinforced concrete, Polymer Concrete, Fly ash concrete, Silica fume concrete</p>	12
III	<p>Concreting Operations: Storing of Cement- In a warehouse at site. Effect of storage on strength of cement, Determination of warehouse capacity for storage of Cement. Storing of Aggregate- at site, Batching- Batching of Cement, Batching of aggregate by: Volume, using gauge box (farma) selection of proper gauge box, Weight spring balances and batching machines, Measurement of water. Mixing- Hand mixing, Machine mixing - types of mixers, capacities of mixers, choosing appropriate size of mixers, operation of mixers, Maintenance and care of machines. Transportation of concrete- Transportation of concrete using: wheel barrows, transit mixers, chutes, belt conveyors, pumps, tower crane and hoists etc. Placement of concrete- Checking of form work. Shuttering and precautions to be taken during placement. Compaction-</p>	14

	<p>Hand compaction, Machine compaction. Vibrators – Types, internal screed vibrators and form vibrators, & selection of suitable vibrators. Finishing concrete slabs - screeding, floating and trowelling. Curing- Objectives of curing, methods of curing like ponding, membrane curing, steam curing, chemical curing, Duration for curing and removal of form work. Jointing- Location of construction joints, treatment of construction joints, expansion joints in buildings - their importance and location.</p> <p>Defects in concrete: Identification of and methods of repair, Importance and methods of non-destructive tests.</p>

13. Module on 'Special Concretes by Dr Hemant Sood , NITTTR Chandigarh.
14. Concrete Technology by P Dayaratman.
15. Video programme on different experiments in 'Concrete Technology' developed by NITTTR, Chandigarh.

DCE 4002 : WATER SUPPLY AND WASTE WATER ENGINEERING

Credits: 4

Semester III

L-T-P: 4-0-0

Module No.	Contents	Teaching Hours
I	<p>Water Supply: Introduction: Quantity of Water: Water requirement- Rate of demand and variation in rate of demand, Per capita consumption as per BIS standards, Population Forecasting.</p> <p>Quality of Water: Physical, Chemical and bacteriological tests and their significance, Standard of potable water as per Indian Standard</p> <p>Water Treatment: Sedimentation - purpose, types of sedimentation tanks, Coagulations flocculation - Filtration - significance, types of filters, disinfection of water, forms of chlorination, break point chlorine, residual chlorine. Flow diagram of different treatment units.</p>	14
II	<p>Conveyance of Water: Different types of pipes - cast iron, PVC, steel, asbestos cement, concrete and lead pipes, types of joints . Appurtenances- Sluice, air, reflux valves, relief valves, scour valves, bib cocks, stop cocks, fire hydrants, water meters their working and uses, Distribution site- Requirement of distribution, layout of distribution pipes, Systems of water supply - Intermittent and continuous , oncept of service reservoir Wastage of water - preventive measures, Leakage detection</p> <p>Laying out Pipes: Setting out alignment of pipes, Laying of pipes . Handling, and jointing of pipes, testing of pipe lines, back filling.</p> <p>Building Water Supply: Connections to water main (practical aspect only), Water supply fixtures and installations related to plumbing.</p>	16
III	<p>Waste Water Engineering: Introduction: Purpose of sanitation, Collection and conveyance of sewage, Conservancy and water carriage systems, Surface drains- various types, suitability, Types of sewage- Domestic, industrials, storm water.</p> <p>Sewerage System: Types of sewerage systems, materials for sewers, joints, Appurtenance- . Manholes, drop manholes, tank hole, catch basin, inverted siphon, flushing tanks grease and oil traps, storm regulators, ventilating shafts</p> <p>Laying and Construction of Sewers: Setting out/alignment of sewers, Excavations,handling and jointing testing and back filling of sewers/pipes. Construction of surface mains and different sections required</p> <p>Sewage characteristics: Properties of sewage and IS standards for analysis of sewage Physical, chemical and bacteriological parameters.</p> <p>Sewerage Disposal: Disposal by dilution, Self-purification of stream, Disposal by land treatment, Nuisance due to disposal.</p> <p>Sewage Treatment: Meaning and principle of primary and secondary treatment , Introduction and uses of screens, grit chambers, detritus tanks,</p>	18

	skimming tanks, plain sedimentation tanks, primary clarifiers, secondary clarifiers, filters, control beds, intermittent sand filters, trickling filters, sludge treatment and disposal, oxidation ponds, Activated Sludge Process Building Drainage: Different sanitary fittings and installations, Traps, seals, causes of breaking seals rain water harvesting during precautions.

DCE 4003 : IRRIGATION ENGINEERING

Credits: 3

Semester IV

L-T-P: 3-0-0

Module No.	Contents	Teaching Hours
I	<p>Introduction: Definition of irrigation, Necessity of irrigation, History of development of irrigation in India. Major, medium and minor irrigation projects. Water Requirement of Crops: Principal crops in India and their water requirements, Crop seasons – Kharif and Rabi, Soil water, soil crop and water relationships, duty, delta and base period, their relationship, Gross commanded area (GCA), culturable commanded area (CCA), intensity of irrigation, irrigable area.</p> <p>Hydrological Cycle Catchment Area and Run-off: Rainfall, definition rain-gauges automatic and non-automatic, methods of estimating average rainfall (Arithmetic system); catchment area runoff, factors affecting runoff, hydrograph, basic concept of unit hydrograph.</p> <p>Methods of Irrigation: Flow irrigation - its advantages and limitations, Lift Irrigation – Tube well and open well irrigation, their advantages and disadvantages, Sprinkler irrigation conditions favorable and essential requirements for sprinkler irrigation, sprinkler system – classification and component parts, Drip irrigation, suitability of drip irrigation, layout, component parts, advantages.</p>	10
II	<p>Canals: Classification, appurtenances of a canal and their functions, sketches of different canal cross-sections (unlined), Various types of canal lining - their relative advantages and disadvantages, sketches of different lined canal x-sections, Breaches and their control, Maintenance of lined and unlined canals,</p> <p>Tube Well Irrigation: Introduction, occurrence of ground water, location and command, advantages and disadvantages, comparison with canal irrigation, Tube wells and explanation of terms: water table, radius of influence, depression head, cone of depression, confined and unconfined aquifers. Yield of a well and methods of determining yield of well, Types of tube wells, cavity, strainer and slotted type, Method of boring, installation of well assembly, development of well, pump selection and installation and maintenance, Water Harvesting Techniques- Need and requirement of various methods, Run-off from roof top and ground surface, construction of recharge pits and recharge wells and their maintenance.</p>	12
III	<p>Dams: Classification of dams; earthen dams - types, causes of failure; cross-section of zoned earthen dams, method of construction, gravity dams-types, cross-sections of a dam, method of construction, Concept of small and micro dams, Concept of spillways and energy dissipaters.</p> <p>Canal Head Works and Regulatory Works: Definition, object, general layout, functions of different parts of head works. Difference between weir and barrage. Cross Drainage Works: Functions and necessity of the following types: aqueduct, super passage, level crossing, inlet and outlet, pipe crossing, Sketches of the above cross drainage works.</p>	14

	<p>Hydraulic Structures: Falls, Cross and head regulators, Outlets, Canal Escapes – genral sketch.</p> <p>River Training Works: Methods of river training, guide banks, retired (levees) embankments, groynes and spurs, pitched island, cut-off.</p> <p>Water Logging and Drainage and Ground Water Re-charge: Definition of water logging – its causes and effects, detection, prevention and remedies, Reclamation of soil, Surface and sub-surface drains and their layout, Concept and various techniques used for ground water re-charge.</p>

DCE 4004 : SURVEYING- II

Credits: 2

Semester IV

L-T-P: 2-0-0

Module No.	Contents	Teaching Hours
I	<p>Contouring: Concept of contours, purpose of contouring, contour interval and horizontal equivalent, factors affecting contour interval, characteristics of contours, methods of contouring: Direct and indirect, use of stadia measurements in contour survey, interpolation of contours; use of contour map, Drawing cross section from a contour map; marking alignment of a road, railway and a canal on a contour map, computation of earth work.</p> <p>Theodolite Surveying: Working of a transit vernier theodolite, axes of a theodolite and their relation; temporary adjustments of a transit theodolite; concept of transiting, swinging, face left, face right and changing face; measurement of horizontal and vertical angles. Prolonging a line (forward and backward) measurement of bearing of a line; traversing by included angles and deflection angle method; traversing by stadia measurement, theodolite triangulation, plotting a traverse; concept of coordinate and solution of omitted measurements (one side affected), errors in theodolite survey and precautions taken to minimize them; limits of precision in theodolite traversing. Height of objects – accessible and non-accessible bases.</p>	10
II	<p>Tachometric Surveying: Tachometry, Instruments to be used in tachometry, methods of tachometry, stadia system of tachometry, general principles of stadia tachometry, examples of stadia tachometry.</p> <p>Curves: Simple Circular Curve- Need and definition of a simple circular curve; Elements of simple circular curve - Degree of the curve, radius of the curve, tangent length, point of intersection (Apex point), tangent point, length of curve, long chord deflection angle, Apex distance and Mid-ordinate. Setting out of simple circular curve- By linear measurements only offsets from the tangent, successive bisection of arcs, offsets from the chord produced by tangential angles using a theodolite.</p>	8
III	<p>Transition Curve: Need (centrifugal force and super elevation) and definition of transition curve; requirements of transition curve; length of transition curve for roads; Ideal Transition Curve; calculation of offsets for a transition curve; setting out of a transition curve by tangential offsets only. Vertical curve- Setting out of a vertical curve.</p> <p>Modern Surveying equipment and techniques: EDM or Distomat, Planimeter, Total station, Introduction to remote sensing, GIS and GPS.</p> <p>Minor Instruments: Introduction and use of minor instruments like Clinometer, Pantograph, Abney Level etc. Use of planimeter for computing areas</p>	6

DCE 4005 : DESIGN OF CONCRETE STRUCTURES

Credits: 4

Semester IV

L-T-P: 4-0-0

Module No.	Contents	Teaching Hours
I	<p>Introduction: Concept of Reinforced Cement Concrete (RCC), Reinforcement Materials- Suitability of steel as reinforcing material, Properties of mild steel and HYSD steel, Loading on structures as per IS: 875,</p> <p>Methods of RCC design: Working stress method, Limit state method.</p> <p>Singly Reinforced Beam (Working stress method): Basic assumptions and stress strain curve, neutral axis, balanced, under- reinforcement and over reinforced beams, Moment of resistance for singly reinforced beam. Design of singly reinforced beam including sketches showing reinforcement details.</p> <p>Shear and Development Length: Shear as per IS: 456-2000 by working stress method. Shear strength of concrete without shear reinforcement, Maximum shear stress and Shear reinforcement.</p>	16
II	<p>Concept of Limit State Method: Definitions and assumptions made in limit state of collapse (flexure), Partial factor of safety for materials, Partial factor of safety for loads, Design loads, Stress block, parameters. Singly Reinforced beam: Theory and design of singly reinforced beam by Limit State Method.</p> <p>Doubly Reinforced Beams: Theory and design of simply supported doubly reinforced rectangular beam by Limit State Method. Behavior of T beam, inverted T beam, isolated T beam and 'L' beams</p> <p>One Way Slab: Theory and design of simply supported one way slab including sketches showing reinforcement details (plan and section) by Limit State Method.</p>	14
III	<p>Two Way Slab: Theory and design of two-way simply supported slab with corners free to lift, no provisions for torsional reinforcement by Limit State Method including sketches showing reinforcement details (plan and two sections),</p> <p>Axially Loaded Column: Definition and classification of columns, Effective length of column, Specifications for longitudinal and lateral reinforcement, Design of axially loaded square, rectangular and circular short columns by Limit State Method including sketching of reinforcement (sectional elevation and plan).</p> <p>Prestressed Concrete: Concept of pre-stressed concrete, Methods of pre-stressing- pre-tensioning and post tensioning, Advantages and disadvantages of prestressing, Losses in pre-stress.</p>	18

7. Singh Harbhajan, Limit Stat of RCC Design"; Abhishek Publishers Ltd.

DCE 4081 : CIVIL ENGINEERING DRAWINGS- II.

Credits: 3

Semester IV

L-T-P: 0-0-6

Module No.	Contents	Teaching Hours
1	WATER SUPPLY AND WASTE WATER ENGINEERING DRAWING Drains and Sewers: a. Cross section of standard types of open drains (circular, v-shaped and μ -shaped) with their foundations b. Cross section of earthen ware and RCC sewer pipes c. Cross sections of masonry sewers (circular and egg shaped)	36
2	Traps, manholes and inspection chamber: a. Detailed section of floor trap and gully trap b. Detailed plan and section of an inspection chamber Detailed plan and section of a manhole	
3	Septic Tank and Soak Pit: Detailed plan and cross sections of a domestic septic tank with soak pit for 10 and 50 users	
4	Bath room and W.C connections: a. Cross-section through the external wall of lavatories at ground and first floor showing the one and two pipe system and the connections of the lavatory to inspection chamber b. Plan of a bathroom showing positions of lavatory, bath tub, wash-basin, taps and showers	
5	Draw sectional elevation of a two storied building showing details of one pipe and two pipes systems with sanitation system.	
6	Practice of reading water supply and sanitary engineering working drawings (PWD/urban Development agencies) including hot water and cold water supply system of a two room set.	
7	Detailed Layout Plan of Sewage Treatment Plant for a residential area and Effluent Treatment Plant for an industrial unit.	
1	IRRIGATION ENGINEERING DRAWING: Typical cross-section of a channel a. L-section of a channel for given data b. Typical cross section of an unlined and lined channel in cutting, partly cutting and partly filling and fully in filling with given design data.	36
2	Layout plan of a canal head works.	
3	Draw the typical L-section of a weir	
4	Draw the X-section of an Earthen Dam a. Homogeneous b. Zoned type c. Diaphragm type	
5	Cross section of a tube well Layout and cross section of rain water harvesting system.	

Reference Books/ Text Books / Case Studies:

2. Civil Engineering Drawing by V.B.Sikka. Katson Publishing, Ludhiana
3. Civil Engineering Drawing by NS Kumar; IPH, New Delhi
4. Principles of Building Drawing by MG Shah and CM Kale, MacMillan, Delhi
5. Building Construction by Moorthy NRK
6. Civil Engg Drawing by Layal
7. Zaidi,SKA and Siddiqui, Suhail;Drawing and Design of Residential and Commercial Buildings, Standard Publishers and Distributors, Delhi.
8. SP : 20
9. National Building Code

DCE 4082 : CONCRETE TECHNOLOGY LAB.

Credits: 1

Semester IV

L-T-P: 0-0-2

List Of Practical

Module No.	Contents	Teaching Hours
1	To determine the physical properties of cement as per IS Codes	24
2	To determine flakiness and elongation index of coarse aggregates	
3	To determine silt in fine aggregate	
4	Determination of specific gravity and water absorption of aggregates	
5	Determination of bulk density and voids of aggregates	
6	To determine surface moisture in fine aggregate by displacement method	
7	Determination of particle size distribution of fine, coarse and all in aggregate by sieve analysis (grading of aggregate)	
8	To determine necessary adjustment for bulking of fine aggregate	
9	To determine workability by slump test:	
10	To verify the effect of water, fine aggregate/coarse aggregate ratio and aggregate/Cement ratio on slump	
11	Compaction factor test for workability	
12	Nondestructive test on concrete by: a. Rebound Hammer Test b. Ultrasonic Pulse Velocity Test	
13	Tests for compressive strength of concrete cubes for different grades of concrete	

DCE 4083 : WATER SUPPLY & WASTE WATER ENGINEERING LAB

Credits: 1

Semester IV

L-T-P: 0-0-2

List Of Practical

Module No.	Contents	Teaching Hours
1	To determine turbidity of water sample	24
2	To determine dissolved oxygen of given sample	
3	To determine pH value of water	
4	To perform jar test for coagulation	
5	To determine BOD of given sample	
6	To determine residual chlorine in water	
7	To determine conductivity of water and total dissolved solids	
8	To study the installation of following: a Water meter b Connection of water supply of building with main c Pipe valves and bends d Water supply and sanitary fittings	

DCE 4084 : SURVEYING LAB-II

Credits: 3

Semester IV

L-T-P: 0-0-6

List Of Practical

Module No.	Contents	Teaching Hours
	Contouring: <ol style="list-style-type: none"> Preparing a contour plan by radial line method by the use of a Tangent Clinometer/Tachometer Preparing a contour plan by method of squares Preparing a contour plan of a Road/Railway track/Canal by taking cross sections. 	12
	Theodolite: <ol style="list-style-type: none"> Taking out the Theodolite, mounting on the tripod and placing it back in the box Study of a transit vernier theodolite; temporary adjustments of theodolite Reading the vernier and working out the least count, measurement of horizontal angles by repetition and reiteration methods Measurement of vertical angles and use of tachometric tables Measurement of magnetic bearing of a line Running a closed traverse with a theodolite (at least five sides) and its plotting Height of objects with and without accessible bases. 	28
	Curves: <ol style="list-style-type: none"> Setting out of a simple circular curve with given data by the following methods <ol style="list-style-type: none"> Offsets from the chords produced One theodolite method IV 	12
	Minor instruments: <ol style="list-style-type: none"> Demonstration and use of minor instruments like Ceylon Ghat Tracer, Tangent Clinometer, Pantagraph, Abney level etc. Use of planimeter for computing areas Demonstration of digital instruments through field visits to Survey of India and other government agencies. 	12

DCE 5001 : DESIGN OF STEEL STRUCTURES

Credits: 04

Semester V

L-T-P: 4-0-0

Module No.	Content	Teaching Hours
I	Structural Steel Connections: Properties and designation of structural steel as per BIS Codes, Riveted connections, types of rivets, permissible stresses in rivets as per BIS:800, types of riveted joints, specifications as per BIS 800 for riveted joints, design of riveted joints for axially loaded members, testing and inspection of riveted joints as per BIS:800 Welded connections: Types of welds, permissible stresses in welds, types of welded connections, design of butt and fillet welded connections subjected to axial loads, testing and inspection of welded joints as per BIS:800	16
II	Tension Members: Permissible stresses in tension for steel, design of tension members as per BIS:800 (flats, angles and tee sections only) Compression Members: Concept of buckling of columns, effective length and slenderness ratio, permissible stresses in compression as per IS:800, strength of columns of single and built up sections with the help of table of permissible Compressive stresses. IS specifications for design of compression members, design of angle, struts and axially loaded columns (no built up columns); use of tacking rivets	16
III	Beams: BIS specifications for the design of simply supported steel beams including design of base plate at the ends (laterally restrained beams only), structural behavior, deflected shapes and function of various elements of a plate girder and free hand sketching of a plate girder and its elements. Roof Truss: Form of trusses, pitch of roof truss, spacing of trusses, spacing of purlins, connection between purlin and roof covering, joint details of roof trusses, loading for roof truss, weight of roof truss, wind loads, snow loads, combination of loads, design of various elements of truss	16

DCE 5002 : HIGHWAY ENGINEERING

Credits: 04

Semester V

L-T-P: 4-0-0

Module No.	Content	Teaching Hours
I	<p>Introduction: Importance of Highway transportation, functions of IRC, CRRI, & MOST, classification of roads organization of a state highway department</p> <p>Road Geometrics: Glossary of terms used in geo-metrics and their importance: Right of way, formation width, road margin, road shoulder, carriage way, side slopes, kerbs, formation levels, camber and gradient Design and average running speed, stopping and passing sight distance, horizontal and vertical curves including transition curves and super elevation. Methods of providing super elevation sketch of typical cross-sections in cutting and filling on straight alignment and at a curve.</p> <p>Highway Surveys and Plan: Designation of a topographic map, reading the data given on a topographic map, basic considerations governing alignment for a road in plain and hilly area Highway location: Marking of alignment, importance of various stages</p>	16
II	<p>Road Material: Different types of road materials in use, soil, aggregate, binders function of soil as highway sub grade</p> <p>California Bearing Ratio: Method of finding CBR value and its significance Testing aggregates: Los Angeles Abrasion test, impact test, crushing strength test, water absorption test and soundness test Aggregates Availability of road aggregates in India, requirements of road aggregates as per IRC specifications</p> <p>Binders: Common binders, cement, bitumen and tar, properties as per IS specifications, penetration and viscosity test of bitumen, procedures and significance, cut back and emulsion and their uses, bitumen modifiers</p> <p>Road Pavements: Flexible and rigid pavement, their merits and demerits, typical cross-sections, functions of various components, Setting out alignment of road, setting out bench marks, control pegs for embankment and cutting, borrow pits, making profiles of embankment, construction of embankment, compaction, stabilization, preparation of sub grade, 1 methods of checking camber, gradient and alignment as per recommendations of IRC, equipment used for sub grade preparation</p> <p>Flexible pavements: sub base necessity and purpose, stabilized sub base: purpose of stabilization, types of stabilization, base Course: Preparation of base course: prime coat, tack coat Surfacing</p> <p>Rigid Pavements: Construction of concrete roads as per IRC specifications: Form laying, mixing and placing the concrete, compacting and finishing, curing, joints in concrete pavement, equipment used</p>	16
III	<p>Hill Roads :</p> <p>Introduction: Typical cross-sections showing all details of a typical hill road in cut, partly in cutting and partly in filling problems of hill areas</p>	16

	<p>Landslides: Causes, prevention and control measures drainage Soil erosion etc.</p> <p>Road Drainage: Necessity of road drainage work, cross drainage works Surface and subsurface drains and storm water drains. Location, spacing and typical details of side drains, side ditches for surface drainage. Intercepting drains, pipe drains in hill roads, details of drains in cutting embankment, typical cross sections</p> <p>Road Maintenance: Common types of road failures of flexible pavements: Pot hole, cracks, rutting, corrugation, fatty surface upheaval - their causes and remedies Maintenance of bituminous road such as seal-coat, patch-work and resurfacing Maintenance of concrete roads-filling cracks, repairing joints, maintenance of shoulders (berms), maintenance of traffic control devices</p> <p>Construction Equipment: Hot mix plant Tipper, tractors (wheel and crawler) scraper, bulldozer, dumpers, shovels, grader, roller, dragline Asphalt mixer and tar boilers Road pavers</p>

DCE 5003 : SOIL MECHANICS

Credits: 04

Semester V

L-T-P: 4-0-0

Module No.	Content	Teaching Hours
I	<p>Introduction: Soil formation, Transport and deposit of soil, Soil composition, Basic definitions, phase relationships, Index properties, Particle size analysis, Shape and size, Grain size distribution curves, Relative density, Consistency of soils, Determination of important physical and index properties of soils, soil classification systems with specific reference to Unified soil classification and IS soil classification systems, Field identification tests.</p> <p>Soil Structure: Soil structure, single grained structure, honeycomb structure, flocculent and dispersed structures, structure of composite soils. Role of soil structure on the behavior of soils.</p>	16
II	<p>Soil-Water Relations: Soil-water systems, Capillarity, Geostatic stresses, Effective and neutral stress, Capillary flow, Darcy's law, Permeability, Factors affecting permeability, Determination of permeability in the laboratory and in the field, Piping, Quick sand condition, Seepage, Governing differential equation for flow through soils. Different kinds of flow: steady state and transient flow, Graphical method of solving steady state flow equation (Laplace Equation): Flow nets and their uses, Flow through homogeneous earth dams: Two dimensional cases, Design of drainage filters.</p>	16
III	<p>Compaction: General Principles, Moisture- Density Relationship, Optimum Moisture Content, Relevant Laboratory and Field Tests, Factors Affecting Compaction, Field Compaction, Compaction Techniques.</p> <p>Compressibility and Consolidation: Fundamentals, 1-D Consolidation, Normally and Over- Consolidated Clays, Void Ratio- Pressure Relationships, Determination of Pre-Consolidation Pressure, Compressibility Characteristics, Terzaghi's One Dimensional Consolidation Theory and Coefficient of Consolidation, Time Rate of Consolidation, Determination of Coefficient of Consolidation in the Laboratory: Curve Fitting Techniques, Primary and Secondary Consolidation and Settlement, Settlement Analysis,, Vertical Sand Drains</p> <p>Shear Strength of Soil: Mohr-Coulomb Failure Criterion, Direct Shear Test, Unconfined Compression Test, Triaxial Tests: Unconsolidated Undrained, Consolidated Drained and Consolidated Undrained Tests, Vane Shear Test, Shear Strength of Clays.</p>	16

DCE 5004 : ENGINEERING GEOLOGY

Credits: 03

Semester V

L-T-P: 3-0-0

Module No.		
I	<p>Minerals : Their physical and detailed study of certain rock forming minerals.</p> <p>Rocks : Their origin, structure, Texture and classification of igneous sedimentary and metamorphic rocks and their suitability as Engg. materials.</p> <p>Stratification, Lamination bedding. Outcrop-its relation to topography, dip and strike of bed, overlap, outlier and inlier.</p> <p>Rock deformation : Folds, Faults, joints unconformity and their classification, causes and relation to engg. Behaviour of rock masses</p>	10
II	<p>Earthquake: Causes, classification, seismic zones of India and Geological consideration for construction of building, projects in seismic areas.</p> <p>Landslides: Causes, classification and preventive measures.</p> <p>Underground water: Origin, Aquifer, Aquicludes, Artesian Wells, underground provinces of India and its role as geological hazard.</p>	14
III	<p>Building Stones <i>Engg. properties of rocks, Alkali aggregate reaction, Grouting, Pozzolonic materials.</i></p> <p><i>Geological investigations for site selection of Dams and reservoirs tunnels, bridges and Highways.</i></p> <p><i>Principles of Geophysical explorations methods for subsurface structures</i></p>	12

DCE 5081 : STRUCTURAL DRAWING LAB.

Credits: 02

Semester V

L-T-P: 0-0-4

List Of Practical

Module No.	Content	Lab Hours
1	Details of reinforcement in a simply supported RCC beam (singly reinforced and doubly reinforced) with the given design data regarding the size and number of bars, stirrups their size and spacing.	72
2	Details of reinforcement for a RCC square and circular column with isolated square footing	
3	Details of reinforcement for a cantilever beam with given data regarding the size of the beam and the reinforcement NOTE: Exercises on bar bending schedules for each of the three above items will be prepared	
4	Details of reinforcement in plan and section for a simply supported RCC one way slab with intermediate support and two-way slabs from the given data. Bar bending schedule should be prepared	
5	Details of reinforcement in a two storeyed RCC internal and corner column. In this, the details of reinforcement at the junction with beams must be shown from the given design data	
6	Details of reinforcement of the junction of a secondary beam with the main beam with the given data	

DCE 5082 : HIGHWAY ENGINEERING LAB.

Credits: 01

Semester V

L-T-P: 0-0-2

List Of Practical

Module No.	Content	Lab Hours
1	Determination of the California bearing ratio (CBR) for the sub-grade soil-WAP to calculate area of the circle.	24
2	Determination of penetration value of bitumen.	
3	Determination of softening point of bitumen	
4	Determination of impact value and crushing value of the road aggregate-WAP to call a function by reference.	
5	Determination of abrasion value (Los Angeles') of road aggregate	
6	Determination of ductility of bitumen	
7	Determination of viscosity of tar/bitumen	

DCE 5083 : SOIL AND FOUNDATION LAB.

Credits: 01

Semester V

L-T-P: 0-0-2

LIST OF PRACTICAL

Module No.	Content	Lab Hours
1	Determination of water content and specific gravity of soil by specific gravity bottle and pycnometer.	24
2	Determination of grain size distribution of soil. a. Sieve test. b. Hydrometer test.	
3	Determination of Atterberg limits of soil. a. Liquid limit. b. Plastic limit. c. Shrinkage limit.	
4	Determination of optimum moisture content and the maximum dry density. a. Proctor compaction test. b. Modified proctor compaction test. c. Use of proctor penetration needle.	
5	Determination of coefficient of permeability of soil. a. Constant head permeameter. b. Falling head permeameter.	
6	Measurement of soil compaction in the field. a. Core cutter method. b. Sand replacement method.	
7	Determination of relative density of granular soil.	
8	Determination of shear strength parameters of soil. a. Shear box test. b. Tri-axial compression test.	
9	Vane shear test.	

DCE 5084 : COMPUTER APPLICATIONS IN CIVIL ENGINEERING LAB.

Credits: 2

L

Semester V

L-T-P: 0-0-4

Module No.	Content	Teaching Hours
1.	Introduction and use of AutoCAD	24
2.	Development of various drawing elements e.g. line, rectangle, circle, surfaces etc.	
3.	Develop plan, elevation, section of single storey building by using AutoCAD	
4.	Development of 3D view of building	
5.	Development of various layouts like electrical, sanitary, water filling using layers concept.	

DCE 5085 : SURVEY CAMP

Credits: 01

Semester V

L-T-P: 0-0-2

Module No.	Content	Teaching Hours
	Purpose 1 To impart intensive training in the use of surveying instruments 2 To train the students to appreciate practical difficulties in surveying on the field 3 Making the students conversant with the camp life 4 Training the students to communicate with the local population 5 Providing an opportunity for the students to develop team spirit 6 To train the students for self management Task: 1 Preparation of topographical plan of a given area Sub Tasks: 1 Reconnaissance of the area and fixing control stations 2 Traversing for the establishment of the control stations 3 Adjusting and plotting the traverse (office work) 4 Carrying the BM from any available reference BM to the site of work 5 Planimetric detailing and contouring 6 Fair plotting of the contours and other details (office work) 7 Finalisation of the group sheet (office work)	24

DCE 6001 : EARTHQUAKE RESISTANT BUILDING CONSTRUCTION

Credits: 03

Semester VI

L-T-P: 3-0-0

Module No.	Content	Teaching Hours
I	Introduction to Seismic Design Parameters Introduction to Earthquakes, Causes of earthquakes, Epicenter, Hypocenter, Earthquake waves: Primary waves, secondary waves, long waves Seismic Region: Seismic zones in India, Intensity and isoseismic of an earthquake, Magnitude and energy of earthquake. Performance of buildings under past earthquakes.	12
II	Introduction to provisions of IS: 1893:2002. Introduction to ductile detailing provisions of IS:13920 for Reinforced Concrete Buildings. Introduction to IS:4326 for construction of earthquake resistant masonry building.	14
III	Special construction methodologies, tips and precautions to be observed while planning, designing and construction of earthquake resistant buildings. Disaster Management: Disaster rescue, psychology of rescue, rescue workers, rescue plan, rescue by steps, rescue equipment, safety in rescue operations, debris clearance and casualty machining, Electric Discharge machining.	10

Text Books:

- Agarwal, P. and Shrikhande, M. (2007), Earthquake Resistant of Design of Structures, PHI Publications.

Reference Books:

- Biggs, J.M. (2004), Introduction to Structural Dynamics, McGraw Hill Publications, New York, USA.
- IS: 1983. (1984), Criterion for Earthquake Resistant Design, Bureau of Indian Standards, New Delhi.
- Paz, M. (1997), Structural Dynamics - Theory and Computation, Springer, New York, USA.

- Duggal, S.K. (2008), Earthquake Resistant of Design of Structures, Oxford University Press, New Delhi.

DCE 6002 : RAILWAYS, BRIDGES AND TUNNELS

Credits: 04

Semester VI

L-T-P: 4-0-0

Module No.	Contents	Teaching Hours
I	<p>Introduction : Brief history of railways, advantages of railways, Indian railways and its salient features</p> <p>Railway surveys: Factors influencing the railways route, brief description of various types of railway survey,</p> <p>Rail Gauge: Definition, types, practice in various countries and India, Uniformity of gauge, unigauge project of Indian Railways Rails – permanent way and its requirements, types of rails, steel for rails, corrugation, corrosion of rails, welding of rails, wear, methods to reduce wear, failure, coning of wheels, hogged rails, buckling, their cause and remedies</p> <p>creep: Definition, causes, effects and remedies Rail Fastenings: Rail joints, types of rail joints, requirements of an ideal fastening,</p> <p>Fastenings for rails: Fish plates, brief idea of spikes, fang bolts, hook bolts, chairs and keys; bearing plates Sleepers: Functions of sleepers, types of sleepers, requirements of an ideal material for sleepers. Brief idea of timber and steel sleepers, concrete and pre stress type sleepers: their salient features and advantages</p> <p>Ballast: Function of ballast, requirements of an ideal material for ballast, various methods used, size and quantity of ballast Plate laying: meanings of the terms, methods of plate laying, tram line method, telescopic method, American method, material required per unit length of track, ballast train, relaying a track Maintenance of track: necessity, maintenance of track, inspection of soil, track and fixtures; maintenance and boxing of ballast maintenance gauges, tools Earth work and Drainage: Forms of cross-section, features of rail road, bed level, width of formation, side slopes, drains, methods of construction, requirement of drainage system.</p>	16
II	<p>Bridges: Introduction: Bridge – its function and component parts, difference between a bridge and a Culvert Classification of Bridges, Classification of Bridges: Site Selection and Collection of Data Factors affecting the selection of site for a bridge, data to be collected</p> <p>Foundations: Depth of foundation, types of foundations, well foundation and caisson(open type only), their details of construction with sketches Laying of foundations (i) dry soil (ii) soil charged with water (iii) underwater, coffer dams their types and construction</p> <p>Piers, abutments and wing walls: Piers-definition, parts; types –solid (masonry and RCC), open; cylindrical and abutment piers. Definition of the terms: height of pier, water way(natural and artificial); afflux and clearance Abutments and wing walls – definition, types of abutments (straight and tee), abutment with wing walls (straight splayed, return and curved), Bridge bearings, Temporary bridges, Maintenance of Bridges</p>	16
III	<p>Tunnels: Definition and necessity of tunnels, Typical section of tunnels for a</p>	16

	National highway and single and double broad gauge railway track, Transfer of centre line of tunnel by shaft method, Method of construction of tunnels in soft rock by needle beam method, Method of construction of tunnels in hard rock with full face method and safety precaution to be taken, other methods of tunneling (names only) Lining of tunnels with concrete, Ventilation –necessity and methods of ventilation, by combination of blowing and exhaust Drainage method of draining water in tunnels, Lighting of tunnels, Shafts, mucking, hauling

2. Khanna, S.K., Arora, M.G., and Jain, S.S. (1994), Airport Planning and Design, Nem Chand and Bros, Roorkee.
3. Limit State Design of Steel Structures by S K Duggal

DCE 6003 : QUANTITY SURVEYING & VALUATION

Credits: 04

Semester VI

L-T-P: 4-0-0

Module No.	Content	Lab Hours
I	<p>Introduction to quantity surveying and its importance. Duties of quantity surveyor</p> <p>Types of estimates:</p> <p>Preliminary estimates- Plinth area estimate, Cubic rate estimate, Estimate per unit base, Detailed estimates- Definition Stages of preparation – details of measurement and calculation of quantities and abstract</p> <p>Measurement:</p> <p>Units of measurement for various items of work as per BIS:1200 Rules for measurements Different methods of taking out quantities – centre line method and long wall and short wall method Preparation of Detailed and Abstract Estimates from Drawings A small residential building with a flat roof Pitched roof with steel truss Timber structures Earthwork for unlined channel Water supply lines Sanitary and water supply fittings i.e. septic tank for a domestic building WBM road and pre-mix carpeting Single span RCC slab culvert Earthwork for plain and hill roads RCC work in beams, slab, column and lintel Stone masonry in retaining walls Arches</p>	16
II	<p>Calculation of quantities of materials for:</p> <p>Cement mortars of different proportion, Portland cement concrete of different proportion, Brick masonry in cement mortar, Plastering and pointing, White washing, Cement concrete flooring, Terrazo flooring, Stone masonry – random rubble and Ashlar</p>	16
III	<p>Analysis of Rates:</p> <p>Steps involved in the analysis of rates. Requirement of material, labour, sundries, contractor's profit and over heads, Analysis of rates for finished items when data regarding labour, rates of material and labour is given: Earthwork in excavation hard/ordinary soil and filling with a concept of lead and lift, Cement concrete in foundation RCC in roof slab, Brick masonry in cement mortar, Cement Plaster, White washing</p>	16

Text Book:

1. Rangwala, S.C., Rangwala, K.S., and Rangwala K.K. (2009), Estimating, Costing, and Valuation (Professional Practice), Charotar Publishing House Pvt. Ltd., Anand, Gujrat.

DCE 6004 : CONSTRUCTION AND MANAGEMENT & ACCOUNTS

Credits: 04

Semester VI

L-T-P: 4-0-0

Module No.	Content	Teaching Hours
I	<p>CONSTRUCTION MANAGEMENT: Introduction: Significance of construction management, Main objectives of construction management, Functions of construction management, planning, organizing, staffing, directing, controlling and coordinating, meaning of each of these with respect to construction job. Classification of construction into light, heavy and industrial construction, Stages in construction from conception to completion, The construction team: owner, engineer and contractors, their functions and inter-relationship, Resources for construction industry: Men, machines, materials and money</p> <p>Construction Planning: Importance of construction planning, Developing work break down structure for construction works, Stages of construction planning, Scheduling construction works by bar charts: Preparation of bar charts for simple construction work, Preparation of schedules for labour, materials, machinery and finances for small works, Limitations of bar charts</p> <p>Scheduling by network techniques: Introduction to network techniques; PERT and CPM, differences between PERT and CPM terminology, Developing CPM networks, Analysis of CPM networks, determining completion time, identifying critical activities and critical path, floats etc.</p>	18
II	<p>Organization: Types of organizations: Line, line and staff, functional and their Characteristics, Principles of organization: Span of control, Delegation of authority, Ultimate responsibility, Unity of command, Job definition</p> <p>Site Organization: Factors influencing selection and design of temporary services for a construction, Principle of storing and stacking materials at site, Location of equipment, Preparation of actual job layout for a building, Organizing labour at site</p> <p>Construction Labour: Conditions of construction workers in India, wages paid to workers, Trade Unions connected with construction industry</p> <p>Control of Progress: Methods of recording progress, Analysis of progress, Taking corrective actions keeping head office informed, Cost time optimization for simple jobs - Direct and indirect cost, variation with time, cost optimization</p> <p>Inspection and Quality Control: Need for inspection and quality control, Principles of inspection, Major items in construction job requiring quality control, Stages of inspection and quality control for: Earth work, Masonry, RCC, Sanitary and water supply services, Electrical services</p> <p>Accidents and Safety in Construction: Accidents – causes, Safety measures, Safety campaign</p>	14
III	<p>CONSTRUCTION EQUIPMENT: Construction Economy: Factors affecting the selection of construction equipment, rolling resistance, effect of grade on required tractive effort, effect of altitude and temperature on the performance of internal combustion engines,</p>	16

	<p>drawbar pull, rimpull, and acceleration</p> <p>Earth Moving Equipment: Crawler and wheel tractors: their functions, types and specifications, grad ability; bull dozers and their use, tractors pulled scrapers, their sizes and output; effect of grade and rolling resistance on the output of tractor pulled scrapers, earth loaders, placing and compacting earth fills. Power shovels: Functions, selection, sizes, shovel dimensions and clearances, output; Draglines: Functions, types, sizes, output; clamshells; safe lifting capacities and working ranges of cranes; hoes, trenching machines: types and production rates</p> <p>ACCOUNTS: PUBLIC WORK ACCOUNTS: Introduction, accounts, work- major, repair, administrative approval – expenditure, Technical sanction, allotment of funds, bill, contractor ledger, Running and final account bills complete, completion certificate & report, hand receipt, establishment-permanent, temporary-aquittance roll. WC, Establishment, MR labour, casual labour roll-duties and responsibility of different cadres, budget-stores, returns, direct material, road metal return, account of stock, misc. P.W. advances T & P – verification, survey, returns, account- expenditure & revenue head, remittance and deposit head, cash book, imprest account, temp advance, treasury challan.</p>

2. Entrepreneurship Development By CB Gupta and P Shrinivasan, Sultan chand and sons, New Delhi.
3. Dynamics of Entrepreneurship development and management (ivth) edition by Shri Vsant Desai.
4. Entrepreneurship development by Shri S.S. Khanka.
5. Entrepreneurship by NITTT& R Chennai

DCE 6081 : PROBLEM SOLVING USING COMPUTERS LAB.

Prerequisite : Fundamentals of Computer & Programming (CSE101).

Credits: 01

Semester VI

L-T-P: 0-0-2

Module No.	Content	Teaching Hours
I	Pointers: Declaration and Initialization of Pointer Variables, Accessing a Variable Through its Pointer, Pointer Arithmetic, Array of Pointers, Pointer to an Array. Functions: Declaration and Definition, Category of Functions, Parameter Passing Techniques – Call by Value and Call By Reference, Passing Arrays to Functions. Introduction To Storage Classes: Auto, Static, Extern and Register.	8
II	Recursion: Mechanics of Recursive Call, Implementation of Recursion, Recursion vs. Iteration. User Defined Types: Enum, Typedef, Union and Structure - Declaration, Initialization, Nested Structures, Arrays of Structures, Structure and Pointer, Passing Structure Through Function. Difference Between Structures and Union.	8
III	The C Preprocessor: Introduction, Macro Expansion and File Inclusion. File Handling: Data And Information, File Concepts, File Organization, Files In C, File Operations: Open, Read, and Close, Trouble in Opening a File. File Opening Modes, Working with Text Files. Introduction to Data Structures Stack, Queue and Linked List and its Basic Operation.	8

Text Book:

- Behrouz A. Forouzan and Richard F. Gilberg, "Computer Science – A Structured Programming Approach Using C", C Language Learning (2007).

Reference Books:

- K. N. King, "C Programming a Modern Approach", W. W. Norton, 2nd Edition (2008).
- Kernighan and Ritchie, "The C programming Language", PHI, 2nd edition (2011).
- P. Dey and M. Ghosh, "Programming in C", Oxford University Press 1st Edition (2000).

Outcome:

At the End of the Course, Students Will be Able to Understand How to:

- Write Programs that Perform Explicit Memory Management.
 - Create Programs that Measure or Simulate Performance and Use Them to Analyze Behavior.
- Write The Programs for Compiler and Operating Systems.
