Theme of Special Session:

Innovation and Advances in Data Science

Data science is a multi-disciplinary field that uses scientific methods, processes, algorithms and systems to extract knowledge and insights from structured and unstructured data. It involves flow of information from large amount of data and obtaining meaningful insights from raw and unstructured data which is processed through analytical, programming and business skills. In recent years, there is a big growth in the domain of Internet of Things (IoT), due to which large amount of data has been generated which is known as big data. Here, the data science plays a key role by identifying, extracting and representing the meaningful information from the raw data.

Topics of interest include, but not limited to, the following:

- Big Data Analytics
- IOT Technology and applications
- Blockchain And Cyber Security
- Deep Learning
- Recommender Systems
- Semantic Web
- Data Mining
- Human-Computer Interaction in Virtual Environment
- Bio-inspired and Metaheuristic Algorithms
- Natural Language Processing
- Social Networking
- Wireless Sensor Networks
- Next Generation Computing
- Image Processing and Computer Vision
- Human-Cognitive Agent Interaction
- Large Scale Multi-Agent Systems
- Telemedicine
- Gamification
